

Revised DeepConnector Flow

The process for creating the connection from a third-party system to the DeepCloud account has been revised.

Signing Word documents from the DeepBox

It was already possible to upload Word (.docx) files to the DeepSign Cockpit, which were then automatically converted into a PDF. Now it is also possible to sign Word files from the DeepBox. The "Sign" button automatically creates a copy of the Word document in PDF format, which is saved in the same storage location and used for the signature process.

<input type="checkbox"/>	Name	Type
<input type="checkbox"/>	 Test Word-Dokument.docx	 Sign

Load authorised signatories for organisation verification using the CHE number

During the verification process of an organisation, the authorised signatories are automatically loaded again using the CHE number.

Improved dialogue for choosing an organisation

If a user has several organisations, a revised selection of organisations appears when uploading a new document. In this dialogue, the display and the search mechanism have been improved.

Observer now available with free subscription

The use of the observer is now also available with the free subscription. This function includes observers with or without admin rights as well as the option to remove or add observers after the signing process was started.

Observers

An observer can follow the signature progress of a document without signing it. An observer with admin role has the same rights as the initiator.
