

Various improvements, such as

- Optimisation in the recognition of tables
- Improved recognition of the payment IBAN

Automatically merge email attachments

The merging of documents that are sent as attachments to an email has been optimised. These merged documents are marked with the tag "Documents merged". During automatic processing via DeepFlow (Approve & Process), documents with this tag can be excluded if required. If several documents have been merged by mistake, they can be separated manually in the editor using the scissors symbol.

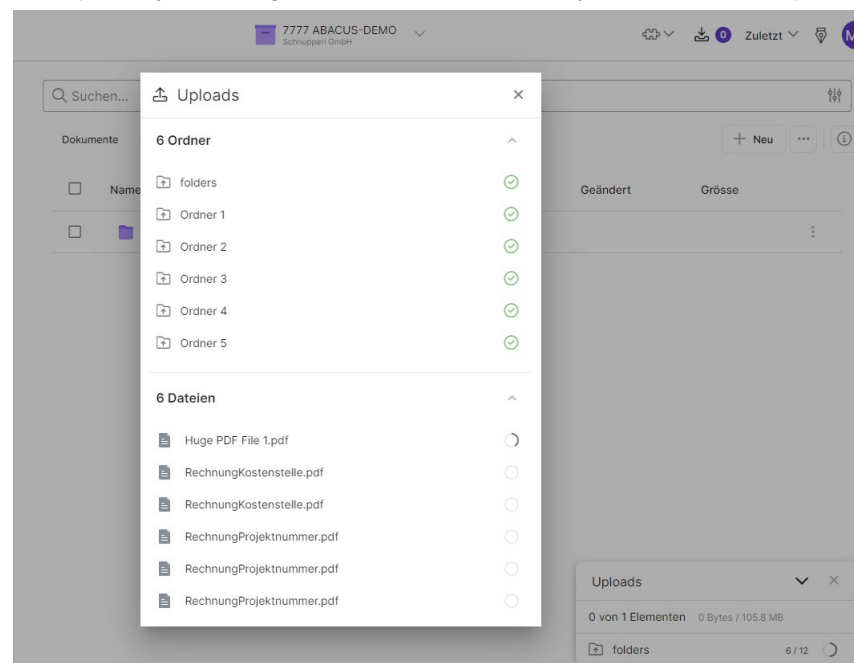

Various bug fixes and improvements, such as

- Improved Error Handling for special cases
- Improved Video Preview, especially in shared links
- Improvements to Drag & Drop Edge Cases
- Improved Add-On Dialogue

Progress bar for document and folder uploads

When uploading documents and folders, a dialogue shows the current progress. This means you always know exactly how far the upload process has progressed. Further uploads can be added to upload job dialogue and the status always remains transparent.

Various bug fixes and improvements to the SSO functionalities

- Improved user guidance during onboarding
- Improvements in setting up the SSO connection

Auto Renew E-Mail for DeepSign Packages

In some cases, emails for the automatic renewal of the DeepSign package were sent even though the renewal function was not activated. The packages were not renewed in these cases.

API only: Enforcing / preventing the visual signature

With our API, you can specify whether the placement visual signature is mandatory for a document to be signed. You can also specify that the visual signature may not be placed on the document.

Various bug fixes and improvements, such as

- Improved Error Handling for special cases
- Improvements to Seal Functionality
- Improvements to HTML Tag Support in Comments for verified organisations
- Various Usability and UI improvements
