

Various improvements, such as

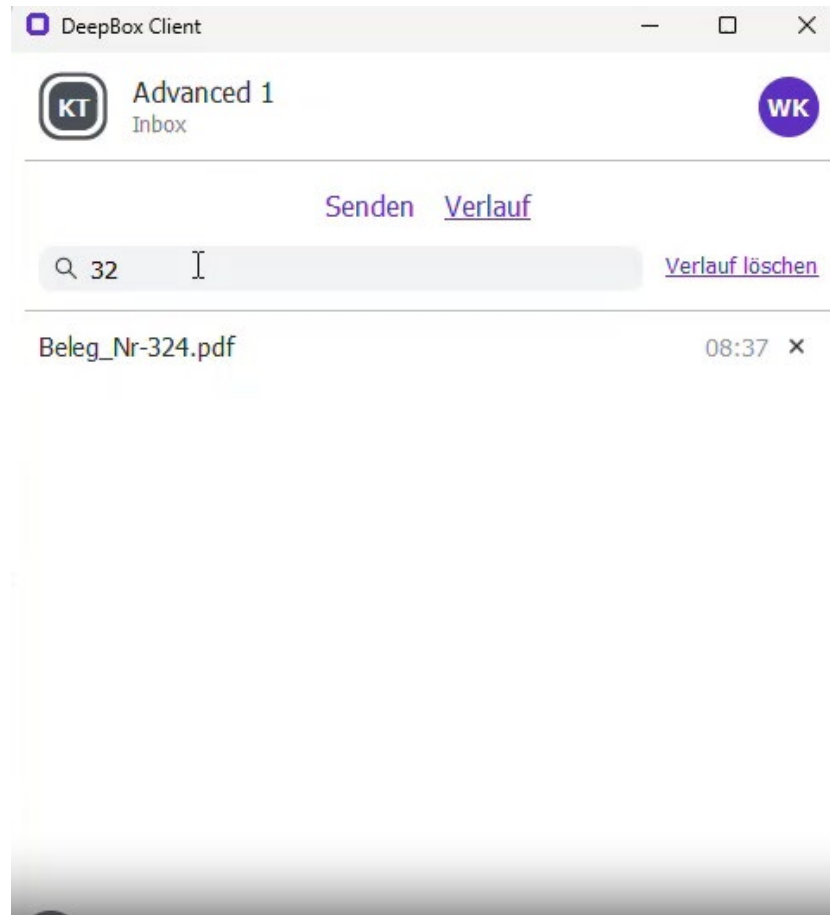

- “Train DeepO” is now possible for the following fields:
 - Invoice number
 - Delivery date
 - Delivery period
 - Document date
 - Order number
- Merge PDF attachments: E-mails containing an invoice and a credit note as attachments are no longer merged.
- The positions have been enabled for the document type “Credit note (received)”.

Various bug fixes and improvements, such as

- Optimisation of the drag and drop function within the file explorer
- Improved downloading from the file preview
- Direct display of video and audio files in the file preview now possible
- Display of box name in the mail-to-box function with URL address
- Improvements when adding shared DeepBoxes
- Improved display of the number of documents within the Inbox
- Optimised document display when using the inbox search on a mobile device
- Revised quick actions in the Trash
- Improved dialogue when moving documents

Windows Client: improved search

The search no longer highlights the documents found but hides irrelevant documents directly.

Define another organisation as billing address

Under Subscription, a different organisation can now be defined as the billing address in the invoice information using the new “Partner name” field.

Subscription Invoice information Invoice history

Billing Contact

Edit

This is the contact or department who receives the invoices or any billing communications

Name		Phone number	<input type="text"/>
E-Mail		E-Mail	<input type="text"/>
Phone number		Language	<input type="text" value="Use the default language"/>
Company/Organization Name	Org Release Notes	This language will be used for all new invoices that will be generated.	
Address	Street 123 9300 Wittenbach Switzerland	Partner name	<input type="text"/>
Invoicing language	English	Only fill this field if you are billing in the name of another company instead of the current company.

New seal feature

DeepSign now offers the option to seal documents. With this new feature, in addition to signing as a private individual, there is also the alternative of sealing on behalf of an organisation. The seal feature must be requested from [Support](#). Once the seal has been ordered and set up, the function is available. Further information on the seal feature can be found [here](#).

Force visual signature on a document (only via API)

For the API interface, it is now possible to set the "Place signatures on document" setting to mandatory. If the signature is set, signatories must provide a visual signature.

Framework upgrade

In addition to optimised speed and increased stability, the comprehensive upgrade of the front-end framework has resulted in numerous smaller optimisations and improvements. This forms the basis for many other functions in the following months.

Various bug fixes and improvements, such as

- Improved scrolling behaviour when placing the visual signature
- Optimised behaviour for visual signatures on attachments
- Improved error messages
