

# Train DeepO

The “extended fields” such as account, cost centre, project and the “user fields” previously had to be activated and displayed manually. These fields are now available for manual entries free of charge and without activation. The automated filling in of values, on the other hand, is subject to a charge and must be activated via the new “Train DeepO” feature (from DeepBox subscription “Small”). This feature can be activated under:

Organization (all boxes)

- Global definitions
- Definitions per address
- Processing log
- Fault reports
- Recognition statistics
- Organisation Settings
- Mailroom
- DeepO API DEV

Box

- 7777 ABACUS-DEMO
- Global definitions
- Definitions per address
- Processing log
- Fault reports
- Box settings**
- User settings
- Tools DEV

Addresses   Positions   **DeepO training**   Payment   Delete data   More settings

### DeepO training (Custom fields)

Medium/Large subscription  
**0.10 CHF** / Document analysis

Small/Compact subscription  
**0.15 CHF** / Document analysis

Activate DeepO training for:

- Keywords**  
Keywords (gear icon next to the field in DeepO) can train printed document values in different document languages and save them in various fields.
- Suggestions**  
Suggestions can be applied based on various conditions to populate, calculate, and look up field values in the master data.
- Property recognition**  
Property recognition is automatically active when a property master is uploaded. The property is already searched during the initial document analysis and matched with the property master.
- Project recognition (must be activated additionally)**  
Project recognition must be manually activated and is only active when a project master is uploaded. The project is already searched during the initial document analysis and matched with the project master.

Notes:

- All fields can be filled manually, DeepO training does not need to be activated for this.
- Documents using DeepO training are billed additionally.

**Activate now**

# DeepO Editor: Configure fields

For each box and each document type, you can define which fields should be visible to the user in the DeepO editor. The following points should be noted:

- Automatically entered values (e.g. through a 'suggestion') are transferred to the ERP system even if the fields are hidden.
- Hidden fields are still subject to validation

## Various improvements

- The 'Train table recognition' feature now supports cross-page tables

## Various bug fixes and improvements in seal management

- Improvements to user rights management
- Various minor errors and problems fixed
- Limitation of the size of the seal image

## New admin page for checking the verification status

There is a new “[My identity](#)” page in the account management, which displays information on the linked DeepID identity and the verification status. Identification can therefore be initiated and carried out independently of a signature process.

## Various bug fixes and improvements in DeepAdmin

- Improved performance for the subscription pages
- Updated code base for improved usability and alignment with other applications
- Improvements to the resend invitation feature
- Optimized error handling and error display
- Improved and updated wording
- Smaller optimizations to the UI/UX

## Improved search

- Better results for hyphens, number format and special characters
- Optimized full text search
- Improved ranking for file name match and full-text results
- Various smaller bug fixes in UI behavior
- More search results can be displayed now

## Various bug fixes and improvements, such as

- Fixed a bug where disabling the observe function worked but resulted in an error page
- Optimization and harmonization of dialogues for a better UI/UX
- Improved file preview for PDFs in terms of performance and UI, due to updated PDF library
- Fixed an issue where the context menu did not show all options under special circumstances
- Improved link to DeepAdmin via the user menu
- Optimizations to the address dialogue
- Improved behavior when moving a large number of documents

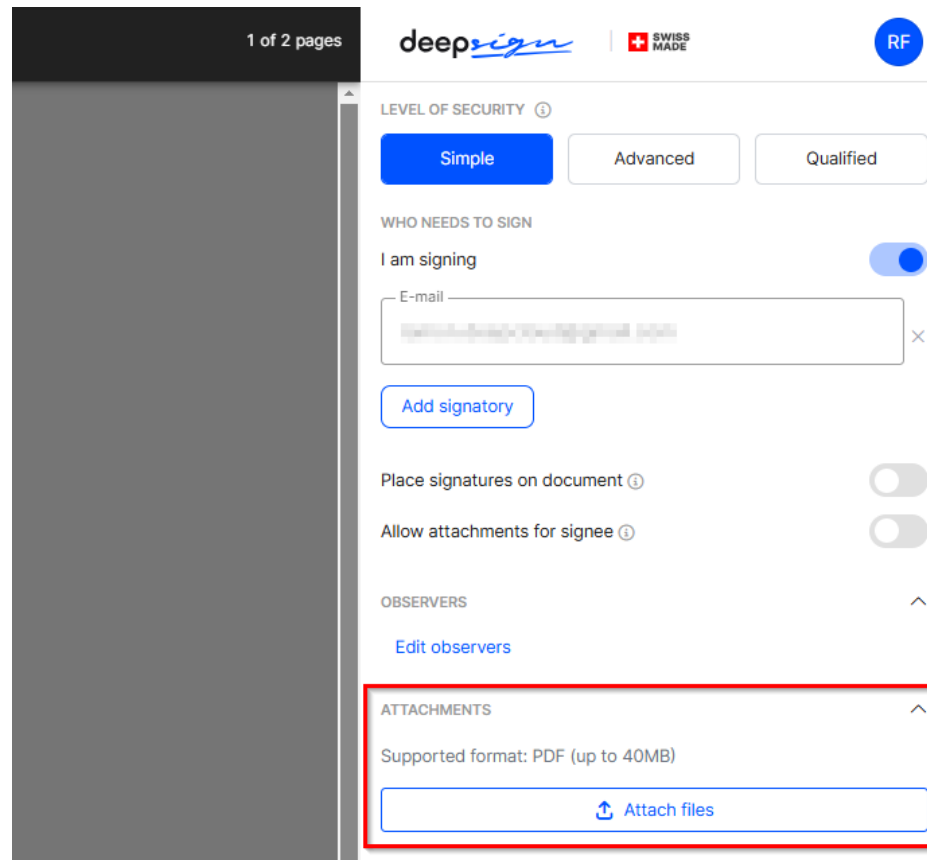

## Improvements for SSO users

- Optimized account creation/login process, especially after a DeepSign invitation
- Improved support of merged domains

## New feature for attachments

The initiator can now upload additional documents as attachments. The attachments can be viewed and downloaded by signees, but do not need to be signed. The maximum file size of all attachments is 40 MB. This new feature can already be used with the free subscription.

# Standard signature type and jurisdiction for organization

It is now possible to define which signature type and which jurisdiction should be selected by default in an organization. This default setting is applied to all newly uploaded documents in the DeepSign cockpit.

User account

- My account
- My signature
- My identity

---

Organisation account

### Organisation Signature Template

---

This template applies to all signatures executed by the organisation and ensures a consistent and standardized appearance for all documents.

**Level of Security**  
Setting applies to all signatories

**Additional text**  
Only displayed if defined by the signatory

**Name**  
Name of the signee

**Date**  
Date when signing takes place

**Location**  
Only displayed if defined by the signatory

**DeepSign Logo**  
Setting applies to all signatories

---

**Default signature type**  
Specify the default signature type. This selection can still be customized later.

- Simple electronic signature
- Advanced electronic signature
- Qualified electronic signature

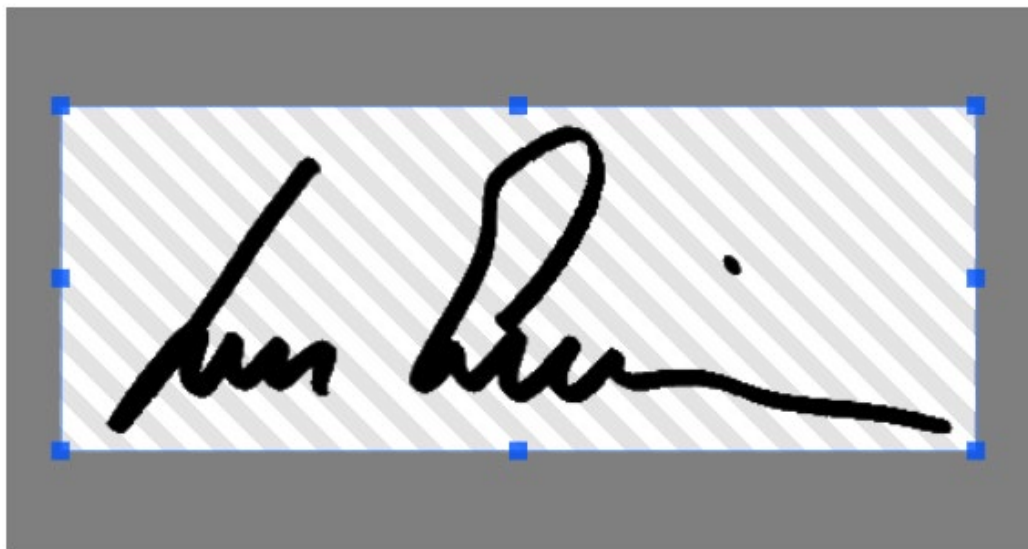

---

**Default jurisdiction**  
Specify the default jurisdiction for the AES and QES signature types. This selection can still be adjusted later.

- Swiss law (ZertES)
- EU law (eIDAS)

## Improved upload of the signature

When uploading a signature, it can be cropped and the background made transparent.

Save

## Major improvements in batch signing

- Improvements to UI/UX
- Optimized error handling
- Improvements for special cases like enforced authority service or enforced visual signature

## Forward signature request without account

Signature requests can now also be forwarded to another email address without having an existing account.

## Various bug fixes and improvements, such as

- Improved error handling for special Mobile ID error cases
- Small optimizations to the upload dialogue
- Improvements to the customization of the visual signature
- The initiator is displayed in draft mode when the observer admin opens such a document
- First step towards harmonization of pop-ups
- Improvements to the “look and feel” of the DeepSign cockpit, especially the tile view
- Updated and improved texts
- Optimization of the search behavior
- Various minor UI/UX improvements
- Fixed UI bug after rejecting a signature

## DeepSign settings moved to DeepAdmin

All settings for the DeepSign application can now be found in DeepAdmin under “Signature template”.
