Sorting for documents is retained

The manually selected sort order of Documents (including sub-folders) is now retained within a session. The setting is saved as soon as a change is made and remains active during the current session. However, if a new browser tab is opened, the default sorting is applied again. The sorting is only saved for the Documents Box area.

Various bug fixes and improvements, such as

- UX/UI improvements in the header
- UX/UI improvements in the side menu
- Updated dependencies
- Improved display when opening expired document links
- Optimised document upload (individual failed documents can be re-initiated directly)

Various bug fixes and improvements, such as

- Improved language validation during onboarding
- Optimised checks during organisation verification

Aggregation of e-mail notifications for document uploads

Multiple files that are uploaded within two minutes are now summarised in a single email - even if they are stored in different locations, provided they belong to the same box. Aggregation takes place regardless of the number of files. Individual uploads remain unchanged. This change currently only applies to emails in the Observer function.

YAPEAL removed as a payment method

Latest release notes:

The YAPEAL account is no longer available as a payment method. The necessary technical changes have been made and finalised. All affected customers were notified directly in advance. However, YAPEAL credit cards can still be used as a payment method.

As of this release:

YAPEAL has now been removed from all accounts as a payment method (incl. YAPEAL discount) as announced.

Various bug fixes and improvements, such as

- PDF Library Update: improved stability and improved visual signature handling
- Improved default handling for ID services (DeepID and Mobile ID)
- "Select all" action now available in the cockpit (Ctrl + A or Command + A)
- UX/UI improvements in the side menu
- Updated help links for FR & IT
- Optimised display of long email addresses
- Improved error handling when uploading unsupported files
- New info panel in the DeepSign cockpit to display additional document details in the overview
