SCIM integration for organizations with SSO

With the new SCIM integration (System for Cross-domain Identity Management), users can be automatically removed from DeepAdmin once they are deactivated or deleted in the source system (e.g. Microsoft Entra ID / Azure AD). The prerequisite is that SSO is set up on the organization. This way, user access is automatically updated and subscription costs are saved at the same time.

Zoom function in document view

For documents in DeepSign, a zoom function similar to DeepBox is now available. While preparing for the signature process or signing, the view of the PDF document can be reduced or enlarged.

Various bug fixes and improvements, such as:

- Fixed a bug that prevented certain files from being loaded on some iOS devices
- Information about whether an observer is an admin is now also displayed during the signature process
- Improvements in user onboarding
- Minor optimizations to the navigation bar
- General stability improvements
