

DeepFlow: Extension of the “Send Email” action

The DeepFlow “Send Email” action has been extended to include the new variable $\$(box.name)$.

Benefit: The name of the current DeepBox can now be inserted dynamically in the subject line or directly in the message body.

Advantage: Notifications are more precise, and recipients can immediately recognise the context.

DeepO: Optimisation of date logic (removal of HKNK)

As part of the revision of the date logic between DeepO and Abacus, the HKNK date field has been removed at item level.

Background: Date fields such as delivery date or accruals are now inherited more efficiently between document header and items.

Impact: Separate entry of the HKNK date for each line is no longer necessary.

Various minor bug fixes, optimisations and stability improvements, such as:

- Fixed an issue where the display name for signing may not have been synchronised correctly from DeepID
- Organisations whose onboarding was cancelled early can now be deleted directly within in DeepAdmin
- The house number is now optional for addresses (billing and organisation address)
- Improved handling of the language for share invitations when the user language in DeepAdmin was changed recently
- Improvements when adding payment methods with an outstanding invoice
- Fixed an issue where settings for the company signature were not disabled, even though this option should only be available for certain subscriptions

Various bug fixes and improvements, such as:

- Improved file uploads: even more parallel uploads are now possible to significantly increase speed; better error handling; upload history and direct navigation to upload locations
- Fixed a minor issue where some information in the DeepBox dashboard was not translated immediately after changing the language
- Improved page refresh behaviour so that the latest files are shown in the file explorer after file uploads
- Fixed an issue where arrow icons in the tree navigation could disappear under certain circumstances
- Fixed an issue where tags could not be defined on the document preview page
- Fixed an issue where the “Move to” action was not available for some users with shared access, even though they had edit permissions
- Improved handling for users with shared access to nested folders
- Firefox only: fixed an issue where the folder name was appended to the file name when uploading a file to a folder
- Fixed an issue where disabling notifications from the “File added” email could fail under certain circumstances
- Improvements to path navigation (breadcrumbs)

Improvements to SSO (Single Sign-On)

- It is now possible to use subdomains for SSO or claimed domains
- In addition to the existing fields (first name, surname, display name and email address), the phone number can now also be synchronised via the ID token and the userinfo endpoint
- If a missing group mapping would result in an empty organisation, we ignore that mapping to prevent users from being locked out of the system

Various bug fixes and improvements, such as:

- Fixed an issue where a placed visual signature could be positioned outside the document when zooming
- Fixed an issue where moving all signatures to a specific page did not always work in tablet view
- Due to a technical change, the display of recently used email addresses of signatories unfortunately had to be reset
- Even faster signing with Mobile ID: Swisscom's terms and conditions no longer need to be accepted every time
- Fixed an issue where, in rare cases, the "Enforce ID service" option was displayed even though the advanced settings were not enabled
- Improved handling of invalid numbers during Mobile ID / SMS authentication in batch signing
- Improved handling of enforced ID services during batch signing
- General minor improvements to the batch signing process
- Optimised the message field for cases where long texts or links were added as a comment
- Various minor UI / UX improvements
- Improved handling when cancelling signature authorisation via SMS
- Minor improvements to keyboard navigation in the DeepSign Cockpit
