

Various bug fixes and improvements, such as

- Improved language recognition: significantly more languages are now recognised, and less widely used languages are processed more effectively.
 - Improved currency recognition.
 - Values that have already been set are now correctly taken into account in the VAT Summary and Document Positions tabs, so dependent suggestions now work reliably.
- For example, suggestion 1 sets the account, and suggestion 2 sets the VAT code based on that account (this now works correctly).

“Last Login” in User Management

A new “Last Login” column is now available in the organisation’s user management. This column shows when each user last signed in. The time is displayed when you hover over it with the mouse pointer.

The screenshot shows the 'Organisation > Users' page. It features a sidebar on the left with navigation options like 'My profile', 'My signature', 'My identity', 'Release Notes', 'Settings', 'Users', and 'Groups'. The main content area has tabs for 'Users', 'Pending Users', and 'Service Users'. Below the tabs is a search bar and a 'Role' dropdown menu. A table lists users with columns for 'User', 'Role', 'Groups', 'Authentication', and 'Last Login'. A red box highlights the 'Last Login' column, which shows the date '27.04.2026' for the user 'Owner'. A tooltip is visible over the date, displaying '27.04.2026, 09:00:14'.

User	Role	Groups	Authentication	Last Login
Owner [redacted]	Owner	- [edit]	Password	27.04.2026, 09:00:14

Optimised management of SSO for domains and subdomains

Existing SSO configurations can now be used more easily for additional domains or subdomains of the organisation. Shared SSO configurations are labelled accordingly. This simplifies administration and reduces the risk of unintended changes.

Various bug fixes and improvements, such as:

- Correct consideration of the number of users included in the subscription when adding new users
- A bug was fixed that caused the 2FA status in user management not to be displayed correctly under certain circumstances
- Optimisation of the upload component
- Improved preview of seals and signatures with images
- Various smaller bug fixes, optimisations, and stability improvements

Various bug fixes and improvements, such as

- Organisations can no longer be created directly in DeepBox and must now be created in DeepAdmin
- Clearer indication that drag-and-drop uploads from Outlook are not supported
- Improvements to approval invitations
- The upload component has been improved
- Minor improvements to navigation in the tree view for special access cases
- The loading state when opening a notification for an added file has been improved
- Improved error handling when attempting to download more than 10,000 files at once
- Various smaller bug fixes, optimisations, and stability improvements

Various minor improvements for SSO users and domain claiming

- In DeepAdmin, predefined roles are now also applied when a user registers via their first login rather than through an invitation link
- User onboarding for cases involving domain claiming has been improved
- Minor bug fixes and improvements for specific use cases

Add groups as signatories/observers

Groups defined in DeepAdmin can now also be selected as signatories and observers. When selecting a group, individual group members can be specifically selected in a dialogue and added to the process

Various bug fixes and improvements, such as

- Improved handling of size restrictions when adding attachments
- Files can now be renamed during upload
- Minor improvements to the file upload dialogue in the DeepSign cockpit
- Size restrictions for visual signatures have been removed: signatures can now be scaled significantly larger, as long as they fit on the page
- Improved handling of placed visual signatures: when hovering over a signature with the mouse, the signature preview becomes more transparent so that any obscured content is easier to see
- Optimised and revised list view in the DeepSign cockpit
- Improved integration of the AES SMS authentication flow
- New option to easily move seals in multi-page documents
- Various minor bug fixes and improvements
