

NEW: Introduction of the DeepSign Envelope Feature

With the new Envelope feature, **several documents can be grouped together** and sent within a single signing process. This makes it more efficient to send related documents to the intended signees.

For example, when a new employee joins, their employment contract, privacy notice and regulations can be combined in one envelope and sent together for signing. Rather than starting several separate signing processes, the signees receive all relevant documents in a single signature request.

The screenshot illustrates the DeepSign Envelope feature through three main components:

- Dokumente hochladen (Upload Documents):** A modal window where multiple documents can be grouped for signing. It shows two uploaded files: 'Mitarbeiter Reglement.pdf' (183.7 KB) and 'Arbeitsvertrag Jane Doe.pdf' (40.4 KB). A red circle highlights the toggle switch for 'Als Umschlag versenden' (Send as envelope), which is currently turned on. Below the toggle, there are fields for 'Umschlagname' (Envelope name) set to 'Mitarbeiter Reglement' and 'Organisation auswählen' (Select organization) set to 'DeepCloud AG'. Buttons for 'Abbrechen' (Cancel) and 'Signieren' (Sign) are at the bottom.
- Signierumschlag - Arbeitsvertrag Jane Doe:** The overview screen for the signing envelope. It shows a list of documents to be signed: 'Arbeitsvertrag Jane Doe.pdf' and 'Mitarbeiter Reglement.pdf'. The 'Anhänge' (Attachments) section is also visible.
- Arbeitsvertrag (Employment Contract):** The preview of the document being signed. It shows the title 'Arbeitsvertrag' and the parties involved: 'Muster AG' (Employer) and 'Hans Muster' (Employee). The document content includes sections for 'Arbeitsbeginn' (Start of work) and 'Dauer' (Duration).

On the right side of the interface, there are additional settings and actions:

- Signaturart (Signature type):** QES - Qualifizierte Signatur, Schweizer Recht (ZertES). A 'Bearbeiten' (Edit) button is available.
- Wer unterschreibt (Who signs):** Two signatories are listed: 'jane.doe@deepcloud.swiss' and 'Sandra.Moll@deepcloud.swiss'. A 'Bearbeiten' (Edit) button is available.
- Alle Unterschriften auf dem Dokument platzieren (Place all signatures on the document):** A toggle switch is turned on. A link 'Alle Unterschriften verschieben...' (Move all signatures...) is provided.
- Beobachter (Observer):** A 'Hinzufügen' (Add) button is available.
- Mitteilung an alle Beteiligten (Message to all participants):** A text area for 'Kommentar hinzufügen' (Add comment) and a 'Einladungen versenden' (Send invitations) button.

Various Improvements, Bug Fixes and Optimisations, such as

- Multiple attachments can now be downloaded together in a single step.
- As part of the introduction of the Envelope feature, various existing processes have been revised and further optimised.
- Users assigned to multiple organisations will now automatically see the organisation they used most recently preselected when starting a new process.
- An issue has been fixed where the message displayed when withdrawing a process was, in certain cases, missing from the email.
- An issue has been fixed where the live preview of a customised signature was not updated immediately in all cases.

Announcement of a Technical Change: PAdES Baseline-LT Will Become the New Standard

From **1 September 2026**, newly signed PDF documents will be created in the PAdES Baseline-LT format instead of PAdES Baseline-T, including embedded revocation information.
